Category: I Didn't Realize I Needed That!
Team Members: Andy Stettler

Scrum Poker

Estimate stories collaboratively, in real time.

THE PROBLEM

Agile teams waste time with clunky pointing tools that require account creation, downloads, or complex setup. Whether in sprint planning, stand-ups, or backlog grooming, many resort to unmuting on calls, counting fingers, or typing estimates in chat, an error-prone process that breaks flow and slows the team down.

THE SOLUTION

ASI Scrum Poker is a real-time collaborative story pointing tool. Zero accounts. Zero installs. Just share a 6-character room code or link and start estimating instantly.

FROM LINK TO POINTING IN UNDER 10 SECONDS

How It Works

1

CREATE

Pick a name &
choose your deck

2

SHARE

Send the room
code or link

3

VOTE

Everyone picks
a card secretly

4

REVEAL

See results &
reach consensus

Features & Technology

Everything your team needs for seamless story pointing

CORE FEATURES

Real-Time Sync

Votes sync instantly via WebSockets across all participants

Multiple Card Decks

Fibonacci, T-Shirt Sizes, Powers of 2, or fully custom decks

Consensus Detection

Automatically identifies when the team agrees on an estimate

Host Controls

Manage stories, reveal votes, accept estimates, and trigger re-votes

SMART DESIGN

Auto Host Transfer

If the host disconnects, leadership transfers automatically

Story Management

Add, track, and complete stories with final estimates

Mobile Friendly

Responsive design works on phones, tablets, and desktops

Zero Auth Required

No accounts, no sign-ups, frictionless onboarding for everyone

TECHNOLOGY STACK

.NET 10

Runtime

Blazor Server

Framework

WebSockets

Real-Time

Bootstrap 5

Styling

C#

Language

Why You Didn't Know You Needed This

Story pointing happens across the board, sprint planning, stand-ups, and most commonly backlog grooming. Most teams either pay for expensive tools that require mandatory accounts, or resort to the classic "hold up your fingers on camera" approach. ASI Scrum Poker eliminates the friction entirely, no matter which ceremony you are pointing in.

The Moment It Clicks...

- ▶ You thought your current pointing process was "fine", until you tried doing it in 10 seconds flat with zero setup.
- ▶ No more "can everyone see my screen?" or "hold up your fingers on 3... wait, Dave, you too."
- ▶ No more waiting for Bob to create an account on yet another tool before the team can estimate.
- ▶ Custom decks mean your team's unique estimation style (Fibonacci, T-Shirt, or your own) is fully supported.
- ▶ Works anywhere, office, remote, hybrid, on any device with a browser. Phone, tablet, or laptop.
- ▶ Automatic host transfer means the session survives even if the facilitator drops off the call.

BUILT WITH AI

This application was initially built solo by Andy Stettler, then iteratively improved and rewritten with AI-assisted development using Claude. From refining architecture decisions to enhancing real-time WebSocket features, AI accelerated the journey from a working prototype to a polished, production-ready tool, proving that AI is a force multiplier for individual developer productivity.
